INTRODUCTION

As a super-user on the front end of design delivery, I now play a unique role at both ends of the tech stack.

△ LITTLE ABOUT ME

I am a design architect (buildings) and a full stack developer (software) with 7 years of professional experience. I worked with large design firms in Los Angeles, New York, Basel and Singapore after receiving my Master of Architecture from Columbia University. I am presently in pursuit of a Diploma in Software Development at Code Institute.

PROFICIENCY

I'm committed to building and bridging skills honed through my experience and dedication to design and tech.

TOP STRENGTH: ADAPTABILITY

I believe the most essential skill — for the building industry or otherwise — is to be able to think and produce algorithmically. As a full stack developer, I stay up to speed with new tech by experimenting with new frameworks and nuanced workflows that engender robust innovation at all scales.

My commitment is to be adaptable to new languages in order to grow, operate and contribute across platforms effectively and consistently.

Building product that is useful,
educational and aesthetically pleasing
in its iterative deployment as well as
its procedural documentation.

MOST LAUDED : DOCUMENTATION STYLE

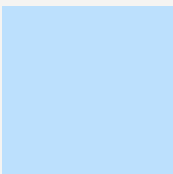

As a trained architect with 7 years of professional experience, in design coordination, I am particularly diligent about quality documentation. I write code that is readable, well-formatted, well-tested, well-documented. As a developer the pragmatism to which I approach planning and coordinate is displayed in my repository and repository commit history.

My approach to documentation/representation that is as conscientious as it is innovative.

my CV.

PROFICIENCY

EXAMPLES

EXPERIENCE

The breadth of my experience in the built environment has uniquely positioned my role in tech.

DEDICATION: “COMPLETENESS”

I am able to approach problems from an angle that, at best and most applicable, is evident in practice and current in an evolving experience industry and/or, at the very least, an angle that is different and unexplored.

While thorough and iterative testing of big ideas of which results are measured, organized and delivered without delay have been features I ascribe directly to the completeness I dedicate to every task; I remain insatiable of the software that delivered the task that measured the results that organized the iterations.
